

Findings of the NAMA Status Report 2014

MitigationMomentum

The coming year is crucial

We are reaching a critical point in the build up to a 2015 climate agreement in Paris.

1

We observe increasing activity on NAMAs

Currently 58 NAMAs are registered in the UNFCCC NAMA Registry and the NAMA database counts 118 NAMAs.

2

But finance for implementation is moving too slow

We see there is a discrepancy between the energy and enthusiasm countries put into the preparation of NAMAs, and the international support that is being made available.

3

What should be the agenda for the coming year?

This edition of the NAMA Status Report provides input for the progress that is required in the coming year.

7

And we need to acknowledge the challenges

Tensions remain between the opportunity to secure NAMA implementation finance, funders' ambition for short term visible impact and long term transformational change.

6

We need strong signals

Development finance institutions will need to signal what their requirements are that allow them to embrace NAMAs.

5

NAMAs can be a robust building block for a future climate regime

There is a role for NAMAs in a future climate regime.

What is happening in the world of NAMAs?

MitigationMomentum

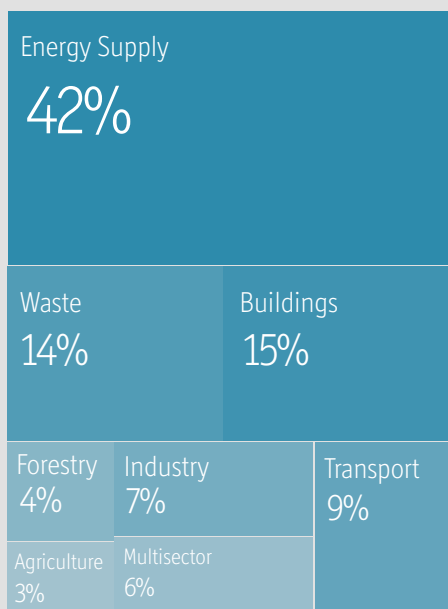

Regional Overview

As in previous years, Latin America remains the region with most NAMA initiatives. The development over the last year shows clearly that Asia and Africa catch up to the developments in Latin America.

Sectoral Overview

Of the seven NAMAs being implemented, four are located in Latin America, two in Asia and one in Africa.

What do the experts say?

MitigationMomentum

Can the **Green Climate Fund** build on NAMAs?

Can the **Joint Crediting Mechanism** contribute?

Which **public finance instruments** are needed?

Can **emerging economies** escape the waiting game?

How to engage the **private sector**?

What to do with the **NAMA Registry**?

How are **INDCs and NAMAs** linked?

Can NAMAs bring **transformational change**?

How to close the gap between **readiness** and implementation?

What is the role of **MRV**?
